

# Applied Machine Learning

Syllabus and logistics

Reihaneh Rabbany

# In-person Class

- **Lectures:** Tuesday & Thursdays, 1:05 pm - 2:25 (Montreal time)
  - Lectures will be **recorded** and uploaded in Mycourses
- **Course Website:** <http://www.reirab.com/comp551.html>
  - Syllabus, slides, deadlines, schedule, evaluation, etc.

# Communications

- **Online Zoom Office Hours** under zoom tab in [Mycourses](#)
  - **Instructor:** Tuesdays 3:00 pm - 4:00 pm
  - **TAs:** please check Mycourses's calendar
- **Course Email:** [comp551mcgill@gmail.com](mailto:comp551mcgill@gmail.com) 
- **Instructor Email:** [rrabba@cs.mcgill.ca](mailto:rrabba@cs.mcgill.ca) [for private communication "COMP551" in title]
- **Course Discussion:** Ed through Mycourses

# Prerequisites

- Strong linear algebra, probabilities, and Python programming is highly recommended: MATH 222, Math 113 and Comp 202
- How can I refresh my background knowledge to follow the lectures better? a lot of excellent online materials, see which one you can follow easier, you can also refer to these reviews on [probability](#) and [linear algebra](#).
- Two **quizzes** on main concepts needed for lectures [with unlimited attempts allowed], due Jan 17th, released this week

# Tutorials

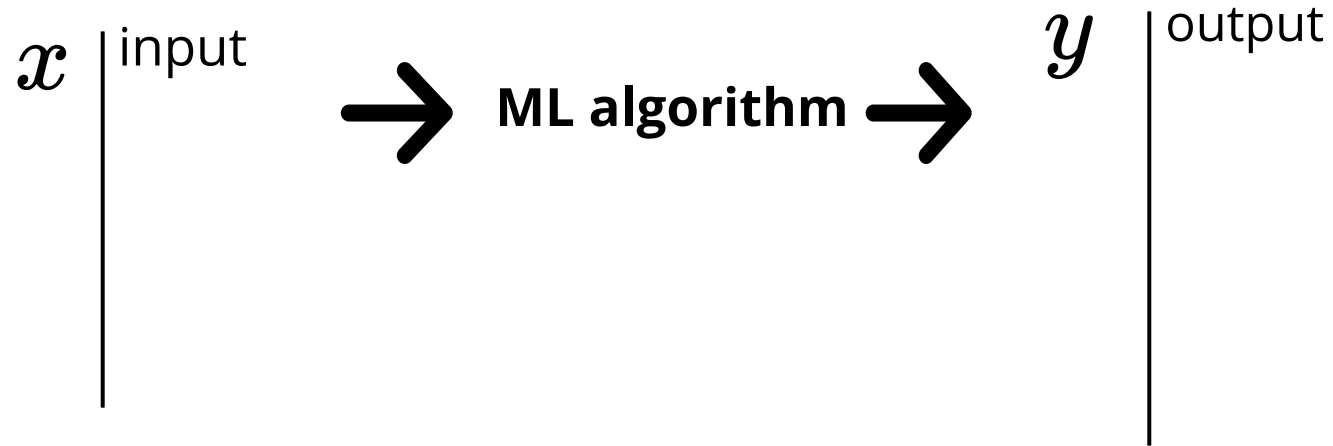

Mid Jan.	Probability & Linear Algebra	
Mid Jan.	Python	<a href="https://www.python.org/">https://www.python.org/</a>
Early Feb.	Scikit-learn	<a href="https://scikit-learn.org/">https://scikit-learn.org/</a>
Mid Feb.	Pytorch	<a href="https://pytorch.org/">https://pytorch.org/</a>

# About this course

## Tentative Outline

- Introduction
- Core concepts
- Linear regression
- Logistic and softmax regression
- Gradient descent methods
- Regularization
- Perceptrons & Multilayer Perceptrons
- Gradient computation and automatic differentiation
- Convolutional neural networks
- Nearest Neighbours
- Classification and regression trees
- Maximum likelihood and Bayesian Reasoning
- Naive Bayes
- Linear support vector machines
- Bagging & Boosting
- Unsupervised learning
- Dimensionality reduction
- Learning with graphs

# About this course

example

$\langle \text{tumorsize, texture, perimeter} \rangle = \langle 18.2, 27.6, 117.5 \rangle \rightarrow \text{cancer} = \text{No}$

# About this course

METHODS AND ALGORITHMS USAGE

from 2020 Kaggle's survey on the state of  
Machine Learning and Data Science,  
you can read the full version [here](#)

# About this course

complementary  
components

## Theory

Lectures

Weekly Practice Quizzes

Midterm Exam

Understand the theory behind learning algorithms

## Application

Codes in lectures

Mini-projects

Practice applying them in real-world

# About this course:

## Evaluation and grading

Regular Practice Quizzes - **10%**

Late Midterm exam - **40%**

Mini-projects - **50%** {group assignments}

# About this course:

## Evaluation and grading

### Regular Practice Quizzes - **10%**

- One per week to check the key concepts discussed in the last lecture
- Available until the start of the next Tue lecture
- Unlimited attempts are allowed

# About this course:

## Evaluation and grading

### Mini-projects - **50%** {group assignments}

- Four programming assignments to be done in groups of three\*, \*no exception to this given the grading load on TAs
- Groups can stay the same between projects, you can also regroup when needed
- **The goal is not to divide and conquer but to collaborate, do not wait for others to complete their tasks, help each other do all the parts in the assignment**
- All group members receive the same mark unless there are major complaints on not contributing, responding, etc. from group-mates, which will be resolved on a case-by-case basis. If a significant difficulty/conflict arises, please send an email to the course email, cc the group-TA and put 'Group-TA' in the title

# Late submissions

All due dates are **11:59 pm** in Montreal unless stated otherwise. **No make-up quizzes** will be given. For mini-projects,  $2^k\%$  percent will be deducted per  $k$  days of delay.

If you experience barriers (including a covid related issue) to learning in this course, submitting the projects, etc., please do not hesitate to discuss them with me directly, and please make sure to put "**551 special**" in the header to make sure I see your email [for general course correspondence, please use the course email: [comp551mcgill@gmail.com](mailto:comp551mcgill@gmail.com)].

As a point of reference, you can reach the Office for Students with Disabilities at 514-398-6009

# Code of Conduct

- Do not share or (re)post any of the course materials online. This includes: video lectures, codes, quizzes, zoom links, etc.
- Be respectful in the course forums and other communications
- Submit your own work for projects and quizzes

## Academic Integrity

The `` McGill University values academic integrity. Therefore, all students must understand the meaning and consequences of cheating, plagiarism and other academic offenses under the Code of Student Conduct and Disciplinary Procedures" (see [McGill's webpage](#) for more information). (Approved by Senate on 29 January 2003)

# Relevant Textbooks

**No required textbook** but slides will cover chapters from the following books, all available online, which can be used as reference materials.

- [Bishop] [Pattern Recognition and Machine Learning](#) by Christopher Bishop (2007)
- [Goodfellow] [Deep Learning](#) by Ian Goodfellow, Yoshua Bengio, and Aaron Courville (2016)
- [Murphy] [Machine Learning: A Probabilistic Perspective](#) by Kevin Murphy (2012)
- Murphy'22] [Probabilistic Machine Learning: An Introduction](#), by Kevin P. Murphy (2022)

# Resources

Numerous great online resources at different levels, a selection is listed on the course website

Some may be more accessible than this course since they are designed for a different audience, but please note that **this is a course designed for graduate students in computer science without ML background**, with a heavy theory component.

## Online Resources

Learning plan

[metacademy](#)

Video Playlists

- StatQuest
- FreeCodeCamp
- Essence of linear algebra and Neural Networks by 3Blue1Brown
- Mathematics for ML by David Rolnick

Courses with Playlist and/or Code

- Introduction to Machine Learning by Google
- Machine Learning by Stanford
- Deep Learning by UC Berkeley
- Hinton's Lectures on Neural Networks for Machine Learning
- Deep Learning & Linear Algebra courses by fastai
- Learning from Data by Caltech
- Deep Learning (with PyTorch) playlist and course by NYU
- Deep Learning by Stanford
- Deep Learning by deeplearning.ai
- Introduction to Deep Learning by MIT
- Information Theory, Pattern Recognition, and Neural Networks by David MacKay

Books with Code

- Probabilistic Machine Learning: An Introduction by Kevin Murphy (book 1)
- Dive into Deep Learning BY by Aston Zhang, Zachary Lipton, Mu Li, and Alexander J. Smola
- Machine Learning Notebooks for O'Reilly book Hands-on Machine Learning with Scikit-Learn and TensorFlow

# Who is in this class? You

245 registered

Mostly undergraduates year 3

Mostly with Computer background

# Who is in this class? Me

Reihaneh Rabbany

Canada CIFAR AI Chair and core member at Mila

Assistant Professor in the School of Computer Science

<http://www.reirab.com/>

Had CMPUT 551 Winter 2009 with Enrl of 9!

# Who is in this class? Me

My research is on Network science, data mining and machine learning, with a focus on analyzing real-world interconnected data, and social good applications.

- Physics (complex systems)
- Sociology (social networks)
- Mathematics (graph theory)
- Data Mining (graph mining)
- Machine Learning (relational learning, graph neural networks)

# Who is in this class? Me

AI4Good applications where mining connections is the **key**

- Interconnected populations
  - Modelling covid-19 by incorporating contact graphs and flight networks
- Interconnected crime
  - Detecting organized human trafficking in online escort markets
- Interconnected discussions
  - Detecting coordinated groups in online political discourse

# Questions?
